

Welcome to our introductory email for project osic

Hello everyone,

in respect to your energy if limited resources in one `way, when people are in **pockets`** isolated fending for self, yet slowly progress blooms.. then when **patches`** of reflection shines on your path giving an abundance of synergy, awareness can make a difference in microseconds;

please welcome **project osic** in the building. we will never do it alone, but our structure is still forming, as we await all to respond to this email, which we are attempting to email globally all schools/representatives for communities without schools within a short period of time. Inviting all to interact with our forum from **Nabble** to be fine-tuned, as we focus direct together the building blocks for common sense.. For each to interact + build local ecological sustainable working community where each self-develop harmony as each `boon with their natural world, leaving no one left behind.

Students come out of schoolroom + into/with community + give hands on support to sort out daily needs for some to start, after some interpersonal role exchanges, in class aiding those misusing/abused, until refine/create with rehabs in place working with the local community + set up a safe over view, a ` **welcome format**, as all do a local walkabout as a prerequisite;

this is about reflecting with self, when reflect with others, as you build/restore your local community, to give all a reality of retrospect, knowing when to do what for our self + or another, locally or a far. giving us yet another good science of common sense to co_evolve with

+ keep it as good gauges, as we work with ourselves daily addressing, hands on with what sustains us locally + afar. fueling us to then share in an exchange with those unable. Understanding that which produces misuse/abuse as we review the effects we leave on our self + others.

we all need to ask our self, do we really want to know the truth of our scars on this planet + beyond, or do we want to pretend they always are left from someone else?? do we want our children at an early age to grow up aiding those unable locally + afar as we understand their reality, when unable to do for themselves?? as we take yet another review within + together + go beyond local channels to get the truth to stop contributing negative effects..

for many have no ideal of one`s personal + community obligations, as well have no local reflections beyond small groups of like thought, that have accepted each other as normal behavior or ran in attempts to self-develop, yet unable to free self of negative issues, unable to explain ones desire, etc.

for decades we have had many leave negative effects on life, yet always we have some that reflect pure intent of our human potential, yet locals in patches develop while pockets are left behind as savages. this is our time to assess these behaviors + bring our self to a cloth/table platform so as to pool our energy globally + beyond + do an exchange. so those left behind unaware can now reflect with what can be, + together we continue to part time cooperatively follow thru + integrate good science gauges for all to use.

for the efficiency of simple living requires us to globally link for a variety of positive reasons. no more will we isolate when we gain so much from taking part assuring each are aware of their obligations, as we continue to reach out farther + find all these pockets without + for once share focus, support all to concentrate + sharpen their sensors, as they bring peace to themselves + their local community.

this is about defining the threads that are worn + torn, for students to link with not just local community to aid their understanding of what is, rather open to the global family + explore our unique earth + beyond. that so many locals have cooperatively developed, yet got overruled as issues got fragmented when a few made decisions for others wrongly;

in this review students fine tune these missing worn torn threads + replace with efficiency. as all come to cloth/table platform + rethink with like ecosystems/subject, as we network with local sustaining natural communities that harmonize that which should be, can be + integrate good science gauges as each is brought to the present + co_evolves..

for all locals to be comfortable, bring self to calm as early signs are deciphered + appropriate applied, defining how to rid needs, remove baggage, develop offerings + self-satisfy

without leaving a footprint. This includes prioritizing those imprisoned in their head that live free in their homes, yet unable to daily sort it out, along with those displaced as we restore rehabs that can expand with cohousing so all students connect with the undeveloped within all.

Which **Orphan Community**, whom I just met, has fueled me to see how with so much local community dysfunction + people not living their full potential, yet in microseconds of hands on reflection, an abundance of clarity/energy is now made available. As people redirect now a wealth of offerings present them as the community gets clear with the interdependence we all have on the natural world. + the fuel it then gives when we `boon with it;

if we restore rehabs to filter people/animals thru as well, back into the wild natural simple living then all open to our human family + how an immediate placement in a isolated family now does not have to be prioritized. Rather interpersonal understanding of awareness is. aiding self-development so each can build their path as they walk it into their opening, now no one is controlled, interfered with due to the many undeveloped behaviors many carry as normal. rather supported to be a local, global + beyond responsible participant.

Which brings us closer to our pure intent being shared as our pure purpose more easily exposes itself as we get fueled from the universe, vs. materialistic desire that many chase as self-development then gets detained + baggage continues to pile high. Especially as we see foreign people want to be westernized, which leaves them unable to neither find their own center nor see what is right below their feet as they are unable to stay happy within their own skin.

further defining their role vs. ride on the wave of those that interfere, as efficiency builds sound long term rehabs, giving all the support needed to fully develop, so as to come to cloth/table community platform as all cooperatively restore self + local community, to its enhanced natural ability. Where creative energy results from prioritizing function, energy efficiently as natural cooperative simple living is reflected from those fueled to network due to already addressing what locally sustains them. As art is daily lived, + good science gauges are understood as common sense + energy efficiency for all life, supersedes energy developments that interfere in some life, while yet others gain, this we do not support..

our `plan does it`s local ecological assessment for micro biomes/large browsers trans-boundary migration as we start from the top with our land/freshwater flow to sea use review.

we ask, whom should define what, for what able being?

no more should there be entities that interfere in one`s ability to develop self. Such as government deciding on war mode economies by themselves or actually the true role they

should play at all in large energy developments, when each local community does best with small alternative energy as a supplement only. no way does it make sense to interfere in a migratory path of beneficial species when houses already exist + can have solar panels put on them as locals recycle wires, etc. as efficiency fuels all to lower volts.

as local communities self-sustain locally, fueling all to then part time do an exchange with those unable afar until they do the same. with all rethinking their effects left by choices made. Where healing + education becomes co_evolving curriculum with local ecosystems/subject, developing unique cultural offerings as indigenous people, we are fortunate to still have, have done successfully, yet this time we integrate good science that has been left in fragments to bring this to common sense not just for a few patches, but cover all pockets without.

will you want government to continue to exist `as is, if all see it would be a rehab for those unable to sustain on own, in need of support?? Or can you see more efficiency from legislators coming back into their local community as interchangeably all roles are filled temporarily as people do what must until each fine tune themselves.. for people to gain understanding for simple respect for life, in all exchanges. as wilderness awareness becomes a seasonal exchange with the natural world. better preparing people for natural earthly changes, vs. emotional suffering as many do now in ER modes with natural disasters that will always co-evolve, with or without our negative effects left.

we can build rehabs for it can happen to any of us at any time, where we would be in need of short or long term support to regain our ability to explore the natural wild + work within it`s sensitivities as we co_evolve with natures process that we are dependent on as a living organism housing many. we can do it efficiently so we get reality updates. for we can go beyond ER preparedness + prevention, while we establish networks to exchange awareness via like ecosystem/subject + share the process as we restore sound ecological sustaining working communities. for those times of need, when unable to self-sustain we address early signs that we can make a difference with, as people share what works or use the tools of rehab to gain our own center + tools to bring us to the cloth/table as an equal participant.

which once we come together exchanging these `ideals as each community self-defines with their local indigenous as new `ways co_evolve with traditional ethics in respect for life, or carry forward what has been from long ago that works. aiding tools for all to reflect via like ecosystem/subject + make these crucial decisions, efficiently to better direct public/natural resources. now each local community than utilizes local people to resolve in an exchange, if none then network + bring in, giving all equality, as harmony is developed by all + this fuels networking for seeking solutions to trigger local application, as well exchanging ideals that work in support for them to do the same.

this `way locals gain what is needed to self-sustain their sovereignty.

we know the goodness of the world`s offerings after a bit of being out in it. + know patches of goodness exist with simple natural living, fueling them to share what works with pockets of those without, yet to figure it out. so we decided to ask you to help us build an archive to share, filling in the fragments, that some remain stuck in, unable to simply live.

no need to reinvent the wheel but yes homework is required to take a look, self-observe + share what works, whether for yourself, your family, your students as they aid the restoration of your + their community.

please come aboard + fine tune this unique global cloth/table platform, we are fortunate to have created with Nabble`s assistance;

to lay out that which is stumping many, + gain others feedback, strategies used to create very nice simple schematics for all to share + add to;

`ways that work for each in like ecosystems/subject, to than bring home + fine tune as you integrate good science gauges, co_evolving in real time with traditional `ways that work, which many are very fortunate to have locals as good stewards to our earth to reflect with. that `boon with their local living environment + build conservation services giving us yet another sense of what can be, as we develop our human sensitivity to all life.

you may be thinking why we would do this when the internet offers an abundance of simple projects to self-empower, build community, letting each do their own thing. well it is because when we pool our thoughts, gain synergy from sharing this earth + beyond, we than go beyond the fragmentation of bad science + belief, for many are not living with their true human potential. Let alone many are carrying behaviors passed on, thinking there is no other `way;

as all than can feel the energy of efficiency, so as to seriously overcome ill health, ill policy + the war mode economy that exists globally as it sucks up valuable resources.

Now living as a local + sharing the harmony as we understand our obligation that fuels our inner tools that allows us to explore with mental clarity + physical energy + cooperatively gain as we unite building a community to our fullest natural potential. where resources are exchanged locally. no more waste traveling across the planet.

if you have this efficiency already we welcome you to come share it, so those without can go figure, or together we can rethink as we again self-observe to see whose effects are interfering + what exchange is needed for people in local communities to aid good rehabs so no one is left with daily struggles to simply live. bringing all to the community cloth/table platform to now become aware as a **`plan is created for restoration enhanced potentials**, as with agro-

ecology, starting from the top in this review, where students actually manifest modes of investment always posted. as people go thru the local tapering transition, making wrongs right as each is supported to rethink + become whole + again offer creative offerings that this time around are needed/appreciated/contribute to local living..

To self-sustain within a sustainable local community, fueling us to reach out to those in need, to do same...

Creating ethnic cultural exchanges as all `boon with their natural world, fueling great self-expression as all once again live it vs. tell story alone of what it once was like..

please take a review;

<http://i-come-to-talk-story-net.3220728.n2.nabble.com/>

we have yet to upload a 160 page or so document welcoming you to **project osic** on the forum, with an overview. we are actively pursuing ideals, defining which way can best support this walkabout + get global exposure. so we may fund raise + sell a book mode online along with giving to each school as they come back + post, showing interest, after receiving this email.

we are at now, still in search of reps globally + international bulk school email lists we may of missed. US Ed Dept. has given us theirs. While we await research to come back with good feedback so we reach out to all. sharing our planet + beyond together as we simply live local, reflecting from those already do_in.

if you receive this email + know of these people we have not been able to reach, please share forum subcategory link to post bulk email;

<http://i-come-to-talk-story.3220728.n2.nabble.com/place-bulk-school-email-list-community-representitive-with-no-school-link-here-f7473806.html>

or just share forum link above + they have access to come, so we all on same page as we create these fine tuning steps along the `way, sharing synergy to resolve, create + offer options for solutions for each local community to balance genetic bio-diversity in their biome(s). people prioritize function energy efficiently adding creative self-expression, creating 1 good universal science that integrates locally so as to flow with nature + co_evolve, as music fills the air + art is lived, wahoo!

this document being edited now, that you may see on our forum, or get emailed to you, once you respond or perhaps in an online book as a fund raiser, etc?? is a story welcoming students into our community as they come out of the school room + **together build a self, aid**

with hands on those in ER mode like- to sort stuff out, than when organized, gather all + fine tune their `plan;

without leaving a footprint. so all undeveloped students within, as community members can have support in place to become a local, global + beyond participant with hands on/curriculum that co_evolves alongside.

students network applications for their local community's ecosystem type/subject as strategies are shared + schematics created, along with talking to new + long working natural cooperatives that sustain self-reliance. fueling them to share part time what works, as the international community wants to live local + network so all can do the same as each go figure + apply a good universal science to share our common denominators of earth + beyond, that speak the same verbiage. Ending the war mode economy + military, as locals self-sustain.

yes peace is our option if we share what works, + our experiences in our travels reveal examples, so as not to go backward, rather patches of goodness reflect with pockets without as all come together thru Nabble's forum + post thought in the working, for feedback in like ecological assessments/strategies so as to have simple respect for all life with gauges as with agro-ecology creating local curriculum from indigenous that are still good stewards, etc. + actual schematics where people can reflect + allow it to trigger what they can bring home + fine tune so as to co_evolve with their biome(s).

now all are understanding their obligations to build local sound sustainable communities that now link our global genetic bio-diversity as our earth works efficiently addressing some of our human produced issues. Not to mention old policy that looks prehistoric, totally disconnected from reality with no good science in place that speaks the same language as our neighbors locally + afar.. now students will network with young + old as each community integrates a working curriculum to co_evolve with their natural biome(s) + speak same language.

Via reflection of those simply living, we gain understanding of our misuse/abuse presently in place producing negative effects, as they use gauges as in agro-ecology/permaculture/natural indigenous `ways to set precedence of making a transition as we work out of negative realities into positive effects.

starting from the top with a land/freshwater flow to sea use review + each community makes a `plan. to restore + move on as we gain balance, maintain mental clarity + physical strength along with sharing seasonal bi`joy experiences from the restored ethnic environmental services that truly give amazing tools to aid our clarity.

we focus direct only to not interfere so local administrative/teachers/community – business/students can rethink this together. each take review, interrelates as good concentration develops;

to actually see how you can adjust in a tapering transition, so as to use it as a good tool to work thru present good + bad, making it stable, efficient + productive. to calmly flow with + out of your existing interpersonal baggage/ curriculums/community issues that are negative, adding positive experiences for you to reflect with + then allow it to trigger your local decisions to create your cooperative community `plan, etc.

for each to choose + define with students taking responsibility, to come back in an interchangeable role + utilize virtual tools to network/post to bring options back to the cloth/table for all to review.

we don't market computers, we support good tools but feel all community should have a choice + anything done on computer should also be done eye to eye;

yes we think students should learn computer, than have a choice once out of school to do or not. this `way our world will have young sharp minds, creating common sense to be integrating good science, as they explore, raise a family + continue to build local community where every they choose, + apply this co_evolving science.

Not just leave it behind in the classroom as it is fragmented now.

Not lost in software/computer, rather gain human potential of balanced sound common sense communicating eye to eye, prioritizing the natural world, that sustains us as a living organism, seriously addressing to rid toxic negative effects left on all life, etc.

this welcome to **project osic** document is easy reading, lots of examples/links, few photos, for one to take a note pad as they start. than work it into one`s life as each get triggered by thought + co_evolve it for themselves. As each than go figure best `way to share their issues as they focus on them in a walkabout with local community;

once school/students/community, coordinates a hands on interpersonal how to in class, where each can see the other as a community member, to address the over view of local community, as they plan the `plan, ending up as good engineers for their own self + aiding others in need, as they organize + coordinate, supporting those unable..

to feel the nice energy that surfaces once each local community member, can now come to the cloth/table format established so all safely recognize the program + can now offer an exchange.

what better `way for a student to develop themselves, then to have hands on building their community as they walk side by side as an equal, with the many degreed, along with those degreed yet unskilled in the work field. many will than see the positive/negative effects left as they do this walkabout in their clients/patients/students, etc. local turf.

leaving positive effects just excel more to aid those still not understanding they are misusing/abused.

we appreciate constructive feedback to be posted on Nabble in appropriate subcategory + then we will be notified + will do our homework to rethink + make changes.

in saying that, how likely is it that you as a teacher/administrator/student/community member, will actually get access to this invite + or have resources to share this locally with all, thru this email? Does your procedure support you to share this? how would you suggest our good ideals to best be assimilated by you, so as to truly enjoy what many are co_evolving with now, as they live simple natural lives, many in home schooling or private or public or without, but we feel all together can make this special, leaving no one left behind. + feel working with this simple format leaves amazing options.

Please post comment + **share with us on schools/community talk subcategory in forum** what will work for you, as you share this with others + let all know how to reach out, as in if you are a school, share + work with students + create a news bulletin so all students ask community/parents, etc?? can you as a school incorporate this with teachers + students working together, adding it to existing curriculum so as to co_evolve for solutions building local community? propose to your school administration?? what could we do differently?? or say??

ex; you as well can create freely your own forum from Nabble specializing + can use ours until or continue if it relates to building community.

plus what we share gives everyone freedom to customize their own creative offerings, co_evolving as we continue to create ethnic cultural exchanges, prioritizing function, energy efficiently with creative expression, leaving no one left behind.

live once again or for 1st time experience + explore with the many good local sensitive skilled people we are fortunate to have that have remained being good stewards of our land/seas/freshwaters. + with good use of virtual tools can make a pen pal + we support that being your best interpersonal `way to dig deep with that long overdue connection with yourself, building new neuro networks as you work that within + now integrate this shared subject as you co_evolve + apply it for your local community, which will help support each to self-develop;

when you explore building your path as you walk it into your opening, you stop in + visit your pen pal + woolah, you have a great friend to be your best tour guide.

do you see how nice this multifaceted **project osic** can be with yourself + all your community members/students within all, having a chance to self-develop. you have just heard a piece of it. So please come make this nice as we share this earth together, with young + old in harmony, as we calmly rid our baggage + end unhealthy aggression. leave the war mode economy behind as we create good relations within our human species potential, which is incredible as we set our local cloth/table platform to build new neuro networks for all locally + afar.. + we start it with our local food sovereignty. Now curriculum shares same good science.

we are not religious, we feel that is a story for each to personally define after they explore, as long as it allows support for each to maintain discipline over one`s self-sensory observation, vs. belief. self-satisfying as they leave no footprint.

with **project osic** we suggest interchangeable roles locally with no multi-tasking, 1 at a time issue focused + followed thru as it responsibly gets passed on to another until everyone locally gets a chance of all roles, etc.. than as each pursue their extended education, others locally + afar gives incentive, to be defined by each educational institution/community. to than invite them/or they pursue their pen pal desires to explore + aid others in this local self-reliant, efficient, community building.

now with tallies, those that have developed needed sensitivities, are easily chosen to supply training for locals to self-sustain/restore their specifics. so locals maintain their local sovereignty in supporting their commons to now sustain the local community as they work it. with yet good modes of sound investment offers always on the table, as investors go thru the tapering transition locally, now being well aware of wrongs making them right, along with rethinking as they themselves interpersonally become whole + now recreate for their local community it`s real needs + sharing it`s offerings locally.

No more layers of consumption + waste traveling from afar.

No more false green movement of large development interfering in micro/large trans boundary migration/local peoples or their ability to control own commons, etc. now rather these species lead our path. + our students become good engineers not exceeding natural enhanced limits as they work with the agro-ecology gauges in place, starting with the land, from the top, as a land/freshwater flow to sea use review is done, + a `plan in motion to restore. as with Prof. Miguel Altieri`s curriculum he creates working with indigenous out in the world, as he co_evolves + teaches it at Berkeley, CA. please review his website, for we have many solutions;

http://ourenvironment.berkeley.edu/people_profiles/miguel-altieri/

we feel good science is not being integrated, rather it is fragmented + we feel this is a more efficient way for each to obtain mental clarity + physical strength, along with energy friendly restored communities where people live locally sustainable. we care that large development may interfere in the micro/large browsers migration. we care that people that are imprisoned in own head, enslaved by misuse/abuse can't find a way out by themselves, we care that everyone cannot enjoy traveling this planet + beyond, enjoying the world's wealth from indigenous ethnic ecological connections, as they have built conservation services that are true community builders/tools. that now once bright young/old minds work together will use intuitive based thought **as high tech of sound value along with indigenous perspective brought in + assessed**, will then be experimented with before any development.

we never thought we would have to train a farmer, or a politician or a investor or a doctor or a judge, etc. in simple respect for life rights, but with our scars left on planet earth + beyond, we all need a bit of support to build new neuro networks, setting a natural state of being. to get all on the same page as each free themselves of baggage + rid the misuse/abuse, leaving no one left behind, as we gain from those that are fueled to part time give this support from a far, as they have harmony establish as they simply live daily with hands on with what sustains them.

this is a multifaceted strategy knowing the great abundance of potential energy just awaiting to harmonize, + as we do this together we all gain the synergy from it's affects;

as young/old students aid each other as they gain the greatness of living local simply, no multitasking, rather understanding as each integrate boon with the natural world. taking part, as well taking responsibility freely for the maintenance of their local school to harmonize with their local community via working within the ecosystems enhanced limits with gauges in place.

now truly preparing each to explore before settling in, living as a local where ever they choose producing their desire responsibly. + now being interpersonally aware have better communications with family, not leaving them to define themselves, rather now including them to walk side by side as each self-develop. **this is our human potential once this material understood + you take part using/creating it for yourself, + your community.**

we feel this will end the war mode economy as students tally local who is doing what + what can be vs. what is in modes as you welcome those leaving negative effects into your local tapering transition, where all gain in the exchange as the one leaving negative effects now rethinks + once again comes back into local community of choice working within nature's limits, making wrongs right locally + afar.

this will also set a precedence to ethical use of our global market as simple life is prioritized, + a commons is protected + worked as with agro-ecology gauges in place, changing the perspective of off-limits, rather now recognize there is no cognitive separation of ecological categories, rather it is one`s cognitive interpretation needing to be understood.

we are a living organism dependent on a healthy balance of genetic bio-diversity locally + to link them globally.

we use our daily natural grown fresh local food/medicine/local wild caught fish, as our best gauge for our health + ability to work + co_evolve as a human species, not to mention all the life we house + upon us/around us that build our/all life`s natural world to `boon with.

it is our small natural farmers + small commercial fisher folks that have hands on with the elements that need prioritized cooperative support, to sustain our food sovereignty at a fair cost to all. so that no regulatory board interferes in their direct line of exchange as they have to deal with the elements giving them enough resistance;

Nor layers of wasteful legislation that should not even exist, once they continue to untangle the web they/all have all taken part of knowingly or not + rid, once all sit down in cloth/table discussion in a tapering transition identifying/exchanging `ways that work, where able locals self-sustain + those unable are supported until not needed to also come into the platform as an equal.

giving all another rethinking process to define their place vs. a/type of rehab, if needed at all, + ask are they personally living as a responsible local participant, so we all cooperatively build local, global + beyond community for all to become aware. Where real time issues are resolved from locals + our local students as they restore this soundness with their local people/understand threads that produce negative + positive results/links/rehabs restoring working sustainable natural communities that integrate the science gauges to set these priorities;

to live the arts, as music + fresh smells of local grown/local wild fish natural food potlucks, fill the air. As we **celebrate**, which fuels us to share local + neighbors afar, so others can do the same. once student`s prerequisites locally completed, each reach out farther + together focus direct efficiently in **the next` move do_in** on patches` virtual message board to bring us eye-to-eye, in an exchange so as to go within + define our effects left contributing, as well share what works with those left unable..

creating a number of avenues from good local shared tool shops, for clarity, physical strength, shared tools to quickly access in need when in the elements working, so cooperatively resources are shared vs. high profits to outsiders, etc;

building schools of variety to suit the technical local needs, provide a link from students to repair the worn torn threads as they create a direct line of communication for all needs to be rid efficiently, as they pursue their local community responsibility, leaving no one left behind. as each become an activist of common sense, bringing all layers/all regulatory people to the table, so no existing policy is ruled on by a few. As they then interfere in another`s ability to `boon responsibly with their natural world + do their job. so as to be clear of issues so no more, do fragments rule, rather each sit down, understand as examples clearly are discussed as they do hands on with real issues, giving them then a variety to further self-develop their choice as each is supported to build their path as they walk into their opening, after finishing these local community prerequisites..

building museums to not just appreciate what was, as we talk story of the past, rather to further support the indigenous/local `ways so as to continue to daily build upon what is most efficient, as folks that are even homeless or had to be relocated, can again connect, as a `way is defined to once again live in choice of ecosystem so as to continue to obtain `boon with the natural community/family, as each day exchanges cultural experiences that co_evolves, creates yet another good science to be shared by all..

we can rid + understand our early signs of perception + learn how to responsibly edit + apply as we understand how we produce + can rid this disassociated energy that has produced fragmented misinformation/waste/confusion, etc.

your feedback is appreciated, as we continue to plug in stepping stones we all can share as the human species, making this project more efficient.

our `about us, in forum gives a good idea of what started this, as we built a sailboat + sailed out in the world + we are presently selling the 1 we have, to then get another to finish networking with the rest of the world. as well the forum gives you an ideal of what works, as we worked hard to make this simple + became a voice of many.

others have a lot more bells + whistle which we don`t, but we represent our combined` effect, for many that where not so fortunate to continue on. so we work hard at programming, going thru the scammers/viruses even from US AID as we wrote our grant app. along with knowing how dangerous confused/ill people can be. up until now we have not received any donations, rather we supported many with our own funds, until we lost quite a bit of investment when the banks went down, but still take responsibility for contributing.

soon once receive confirmation of our 501.c3 non-profit status will open for donations;

we ask people to pay what can so others without can also come aboard, while others that can give more do.

this project or any project your community develops with good efficiency can be done simply, + it is up to each school/community to creatively do as you see fit, + we invite you to share in our tools to build these local + afar tools, for all to have freely or at little cost.

we have been very fortunate to co_evolve as we experienced simple pure intent along the way + hope you enjoy as we have + still are.

Good day + looking forward to you or your community representative coming aboard in an interchangeable role. For we are like the father of the recently deceased musician Doc Watson, as he stated to Doc at a young age with Doc being blind, as he handed him a guitar + said i will try to get you a better one, but **this may help you get thru the world..**

Thank you for this review, please make space to take part, **this can be better developed**

by our combined` effects..

Sincerely, kara j Lincoln

come talk + help us build project osic as we build an archive + share what works

i come to talk story

forum; patches` virtual message board to bring us eye-to-eye

<http://i-come-to-talk-story-net.3220728.n2.nabble.com/>

Begin as the student within awakens as you walk side by side with your local community..
